

The Salmon Lifecycle

Salmon are **anadromous**, which means they are born in fresh water, then swim to the ocean to grow into adults, then swim back to fresh water to reproduce. Below are pictures of different parts of the salmon lifecycle. First **match** the picture to the appropriate term. After that, **number** the pictures in order, starting with the salmon eggs. Refer to pages 4-5 for help.

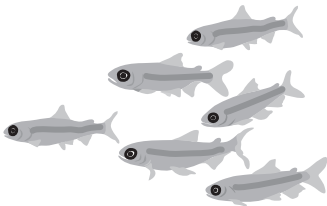

Salmon eggs

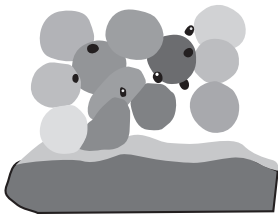

Spawning

Salmon fry

Building a redd
